Education

Stanford University – B.S. in Computer Science — Sep 2026 – Jun 2030 (Expected)

Relevant Coursework: Programming Abstractions (CS106B), Thinking with AI (CS193T), Minds and Machines (SYMSYS 1)

Experience

Research Intern — Jun 2025 – Sep 2026

University of Mississippi with Dr. Bo Wang — *Oxford, MS*

- Built a domain-adaptive LLM prompt engineering framework for authorship verification on AI Ink's foundation; outperformed prior machine learning baselines by 10.6% without fine-tuning, with built-in explainability
- Designed an adversarial multi-agent debate (MAD) LLM system across OpenAI and Anthropic models, grounded in stylometric evidence with confidence-scored verdicts; benchmarked against naive LLM and LIP baselines over 3 seeds

Independent Researcher — Aug 2023 – May 2025

Self-directed — *Oxford, MS*

- Built "AI Ink," an AI-text detection tool helping K–12 educators flag unethical AI use in student essays
- Extended AI Ink into a machine learning authorship verification system combining transformer embeddings with handcrafted stylistic features; outperformed baseline token-based models by 25%+
- 2x Regeneron ISEF Finalist; 3rd Place National Security Agency Special Award (ISEF 2024); NJSHS oral presenter; featured in *Science News Explores*; invited talk at the University of Mississippi CS Dept.

Lead Researcher — Feb 2023 – Jun 2024

University of Mississippi with Dr. Thai Le — *Oxford, MS*

- Investigated how intuitive text obfuscation strategies deceive AI-generated text detectors; led manual obfuscation experiments testing detector robustness, exposing the limits of existing detection tools; published 1st author paper

Front of House Team Member — Aug 2026 – Sep 2026 (Seasonal)

Chick-fil-A — *Oxford, MS*

- Delivered Chick-fil-A's "2nd Mile Service" to ∼150+ guests per shift at the counter and drive-thru during peak hours
- Handled frustrated guests with empathy and patience on a 120-employee team, resolving concerns and earning repeat visits

Projects

Nanobite | ***TypeScript, Node.js, MCP*** — Oct 2026

"Best Agent Communication Setup" at ***YC - Make Something Agents Want Hackathon*** — *San Francisco, CA*

- Built a human-in-the-loop **agent-to-agent framework** letting a coding agent ask another company's agent for fixes buried in an engineer's past debugging sessions, over email with no shared accounts
- Designed a three-gate pipeline (**secret/PII masking**, **LLM** minimization, human approval by email) returning only an essential capsule: **17-second** round trip, 760-token sessions cut to ∼**230 tokens** (**70% reduction**)

MacLock | ***Swift, SwiftUI, XPC*** — Sep 2026 – Present

- Built a hard-lock macOS focus app with a root **launchd daemon** and code-signing-verified **XPC**; a KeepAlive agent and monotonic timekeeping let sessions survive quits, force-kills, reboots, and system-clock changes without ending early
- Blocked apps/sites via **CGEventTap**, **Accessibility API**, **/etc/hosts**; event-driven design cut CPU from ∼2% to ∼0%

Publications

- **AAAI 2026**; first-author extended abstract and poster; selected for spotlight oral presentation (∼11% acceptance)
- **NeurIPS 2025**; first-author AI education video on multi-agent LLM debate; Education Resource Showcase
- **CSCI 2025**; first-author paper and oral presentation (∼20% acceptance)
- **ICECET 2024**, Sydney, Australia; first-author paper and oral presentation (∼35% acceptance)

Leadership

- **VEX Robotics Lead Coder:** programmed competition robots in C++; 2026 VEX Worlds Championship qualifier
- **Speech and Debate President:** led a 70-member team to its best-ever state finish and raised $12K for travel; 2026 Public Forum State Champion; placed Top 36 at NSDA Nationals
- **Magnolia Coding Club Founder:** launched a statewide online coding community for rural students across 10 schools

Technical Skills

Languages: Python, C++, C, Swift, TypeScript, HTML/CSS

AI / ML: scikit-learn, spaCy, NLTK, SHAP, Hugging Face Transformers, OpenAI and Anthropic APIs

Systems & Tools: Linux, macOS (launchd, XPC), Node.js, SQLite, MCP, parallel computing, Git, pytest
